

Arion OptiSafe™ Extremely strong and solid design. The panels have a box section frame 20mm x 20mm welded on all 4 sides and 1 centre support.

The system can also be supplied in different grades of stainless steel. The panels are clad in clear or smoked polycarbonate (PC) sheets as standard. The PC panel gives very good visibility and the guard can be installed close to the dangerous machine without compromising safety.

Arion OptiSafe™ can also be supplied with PVC panels or PETG panels with similar characteristics to polycarbonate (PC) but at a lower price. The PVC panel gives complete protection to the eyes during welding work from both torches and arc, at the same time it gives some protection against welding spatter and effectively stops swarf and hot or dangerous liquids spreading.

System height: 2100mm.

Panel height: 1900mm.

Panel widths: 200, 300, 500, 700, 800, 1000, 1200 and 1500mm.

Other heights and widths available on request.
